

Air Chucks for ARB Air Compressors

ARB has released air chucks that are designed to ease tyre inflation when using an ARB compressor.

The ARB Inflator combines a bronze tube, clip-on chuck, 330mm flexible braided hose and an in-line air gauge with rubber guard.

The push-on chuck is handy for dual rims and rims fitted with bead locks, where it's often difficult to reach the second valve stem.

Another new clip-on chuck is angled, for easy use with small wheels and motor bike valves.

The in-line air gauge housing is fitted with an air-bleed button, for easy deflation and the three chucks have internal air shut-off valves. End fittings are standard US male, but can be removed and replaced with 1/4NPT thread fittings. Warranty is two years.
