

4x4 EQUIP - LED STRIP LIGHTING

Another impressive release from Melbourne-based 4x4 Equip is a range of flexible LED 12V strip lights. Known as Mono LED Light Ribbons and featuring 60 LEDs per metre, with a 120-degree viewing angle, these lights are only 8mm wide and available in 1m, 2m, 3m, 4m and 5m lengths.

Lighting power is exceptional, yet the battery draw is only 300mA per metre and all Mono LED Light Ribbons are waterproof.

Each Mono LED Light Ribbon comes ready to use, with three metres of cable, a cigarette-lighter/Hella/Merit plug and an in-line switch.

Backed with strong 3M adhesive tape Mono can be attached to most surfaces and are ideal inside vehicles, camper trailers, caravans, boats, yachts and horse floats.

Mono LED Light Ribbons are available in either bright white light for general use, or with yellow light to help reduce insect activity. They are also available with either a white background or a black background to blend in with the desired background surface.

Each segment has inbuilt terminals, allowing the ribbons to be cut to any size and connected with soldered wires.

Prices range from \$59.95 (Mono 100 – one metre) to \$169.95 (Mono 500 – five metres).
