

NEWS - NARVA takes the Extreme to extremes

Narva's Extreme gas-discharge driving light was already one of the best we've tested, but has been further enhanced with a brighter 45W, 5000°Kelvin globe.

The introduction of the new internally mounted Gen 5 - 45W HID (high intensity discharge) ballast and D1 globe into the Narva Extreme has resulted in more than 10 percent more light, but with the characteristic lower power consumption of HID technology.

Narva claims the new Extreme has an initial ignition time of only 2-3 seconds, with instantaneous re-ignition.

The Narva Extreme has a unique three-bolt mounting system; triple-point TIG-welded chrome-molybdenum steel frame and glass reinforced nylon housing. These combine to ensure the lamp is stabilised to resist shake even on the harshest of corrugated roads. Beam adjustments can be made via a knob and slider rail and the keyed hex head screws reduce the risk of theft.

The new Extreme has a water-tight (IP67 rated) internal chamber with a Gore-Tex® breather.

Narva Extreme Xenon HID lamps come with chrome or black mounts; broad beam; pencil beam; combination broad and pencil beam kits in 12 and 24 volt. Clear protective covers are supplied with the lamps.
